

WIRELESS INTERNET ACCESS

Internet access is available at the 1612 Marion St. location (1st floor only) by following these instructions. (The procedure for your laptop may vary.)

Configuring Wireless Networking on Windows XP

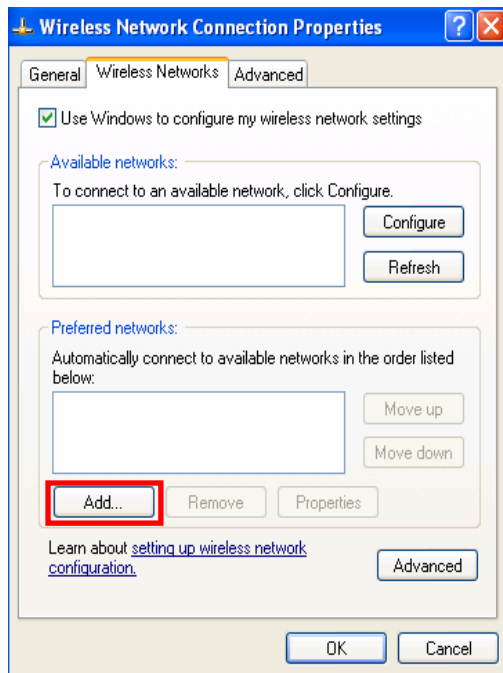

Go to **Control Panel > Network and Internet Connections > Network Connections**. Right-click on **Wireless Connection** and select **Enable** if it's disabled. **Right-click** on **Wireless Connection** again and select **Properties** from the submenu that is displayed.

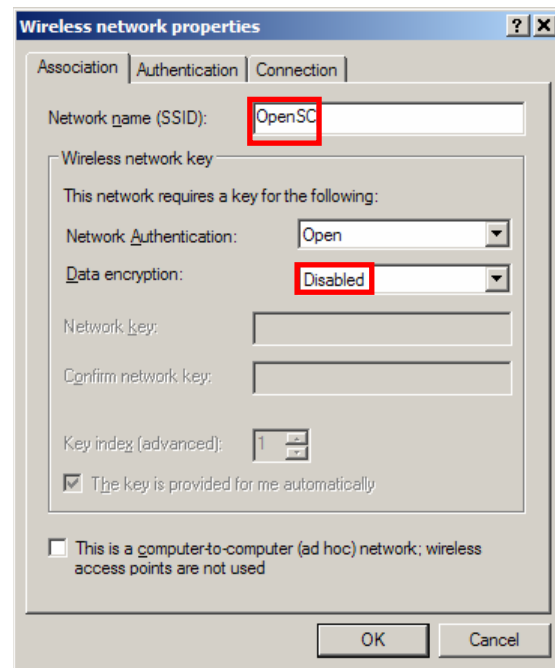

(Fig. 1)

"Disabled" will be replaced by "Connected" when setup procedure is complete and Internet is accessible.

Select the Wireless Networks tab. Click the **Add** button (Fig. 2).

(Fig. 2)

(Fig. 3)

Type in the SSID **OpenSC** (Fig. 3). The SSID is case sensitive. Set the Data Encryption to **Disabled**. Select **OK** on each window to complete the setup. The Wireless Network Connection should show **Connected** (Fig. 1).

Test the connection. If you don't get a connection, **right click** the Wireless Network Connection (Fig. 1) and **Disable** then **Enable** it.
